

# An Introduction to 92 Energy Canada

Andrew Sinclair

November 2022

92Energy.com

ASX:92E  
OTCQX:NTLF

# 92 Energy's Background

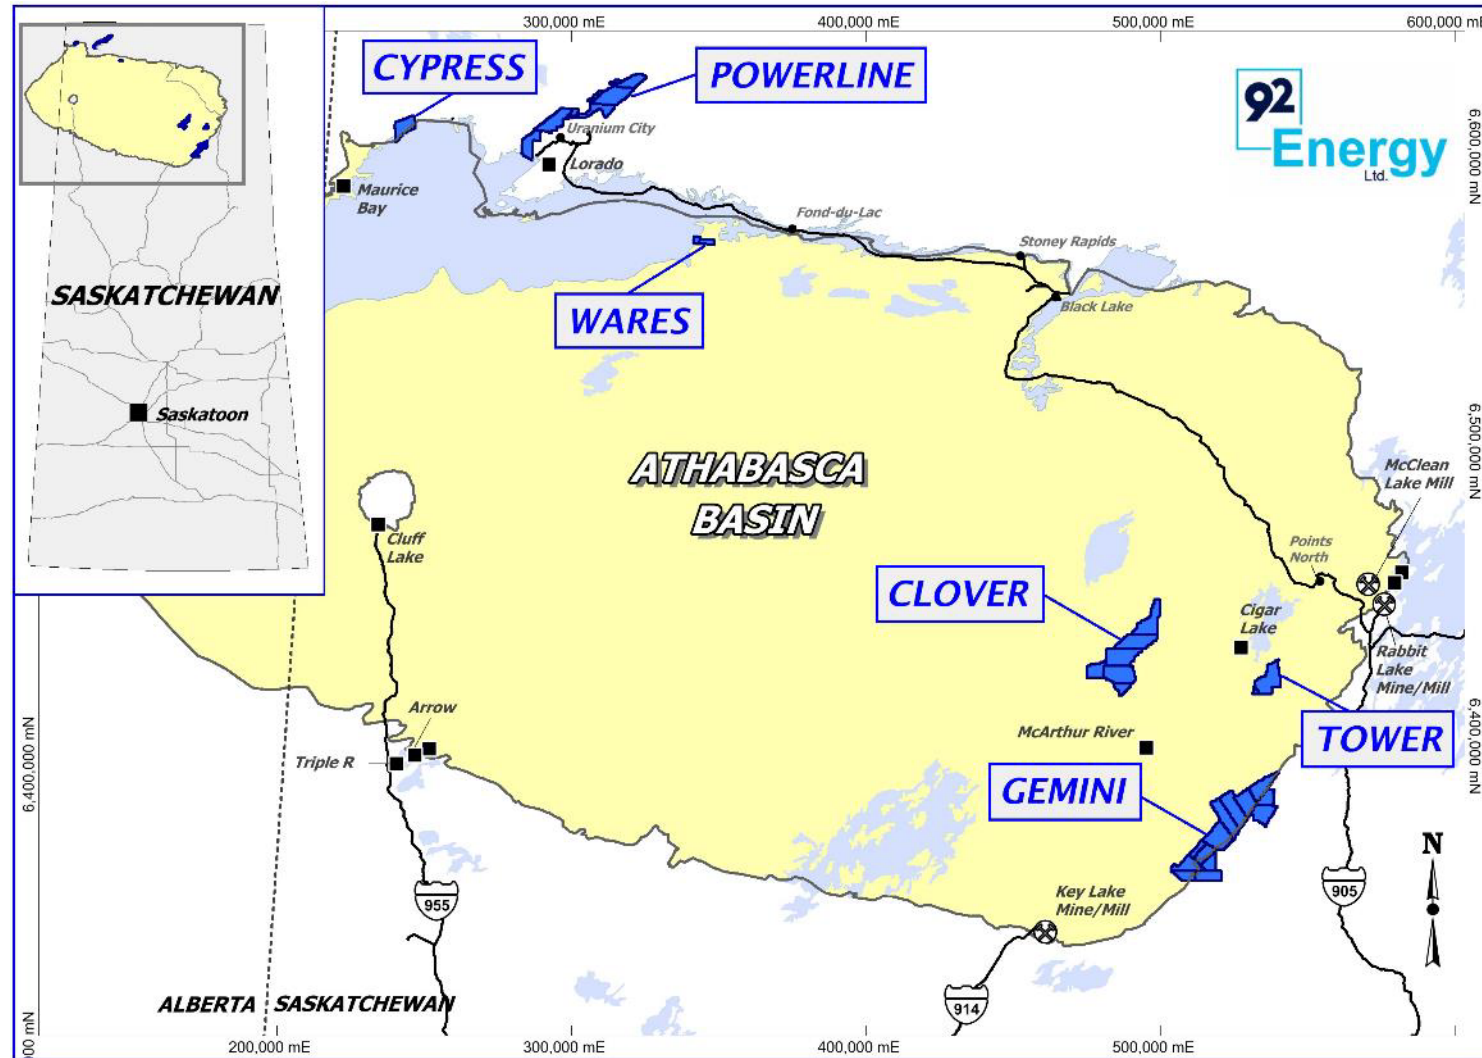

- 92 Energy (92E) is an active, uranium focused exploration company
- 92 Energy is a new entrant to the Saskatchewan mineral exploration scene, i.e., an early-stage explorer
- Head office is in Perth, Australia, with a technical group based in western Canada
- Close knit technical team with decades of work experience in north Saskatchewan (former Denison/IsoEnergy, Fission Uranium)
- 92E's first ever work program was conducted during the summer of 2021, since then five more boots on the ground programs have been completed

# 92 Energy in the Athabasca Basin

- 92E owns 100% of **six uranium** exploration projects in and around the **Athabasca Basin**
- Three projects (**Wares**, **Powerline** and **Cypress**) are located in the Uranium City – Fond du Lac area
- Three projects (**Gemini**, **Tower** and **Clover**) are located in the eastern Athabasca Basin, near Wollaston Lake and Points North
- To date 92E has only performed work at **Gemini** and **Tower**

# GMZ Uranium Discovery at the Gemini Property

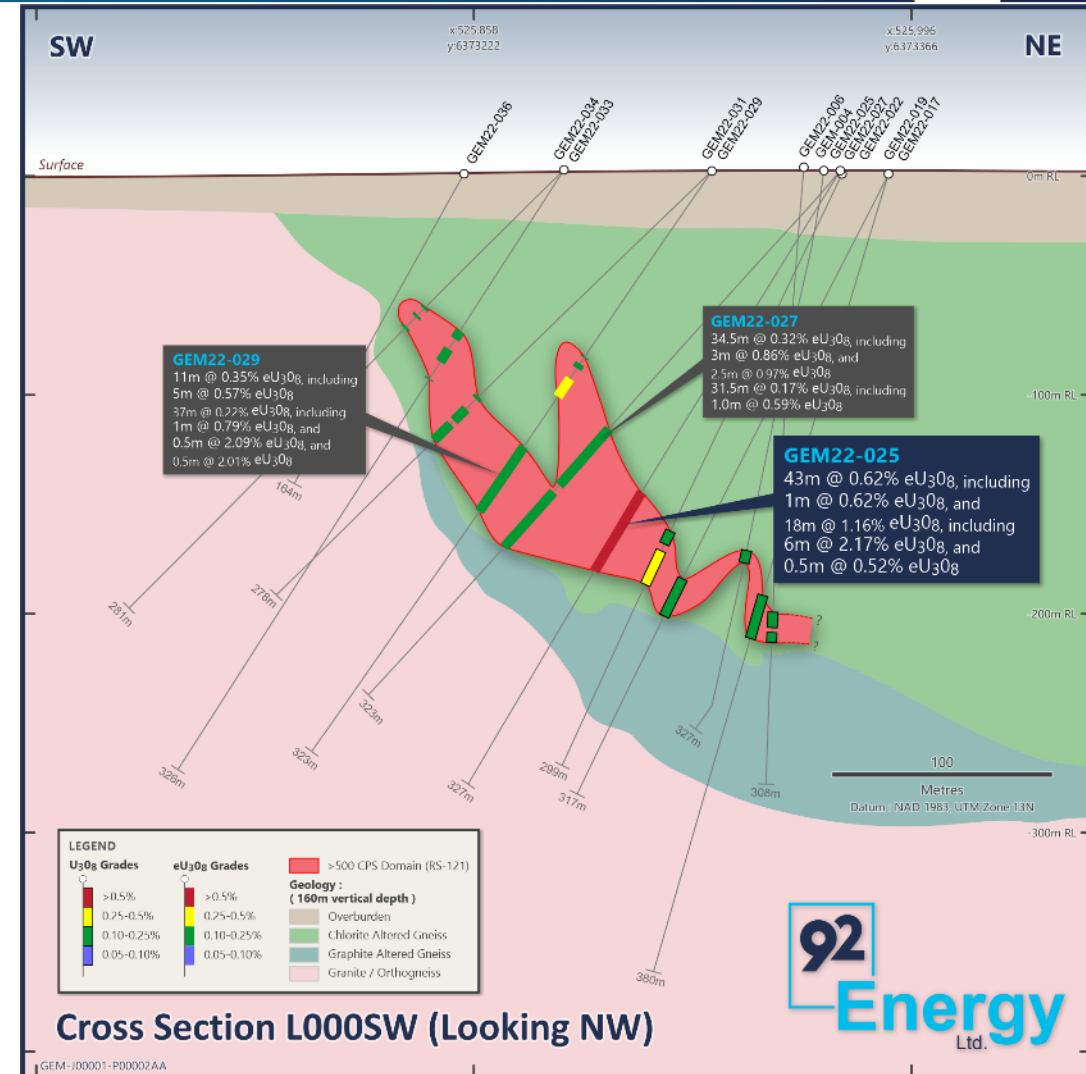

- During 92E's first ever drill program at the Gemini project in 2021, the Company intersected 5.5m of 0.12%  $U_3O_8$  in the final drillhole
- This uranium discovery was subsequently named the **Gemini Mineralised Zone (GMZ)**
- Since the discovery of the GMZ, two drill programs have been carried out by 92E totaling **45 drillholes** and **12,542 metres** of drilling
- Gemini work programs are based out of a temporary work camp 100 km southwest of Wollaston that houses up to 25 personnel

Radioactive drill core from the GMZ – handheld scintillometer values >13,000 counts per second (cps) compared to a background of 80 cps

# Gemini - GMZ Overview

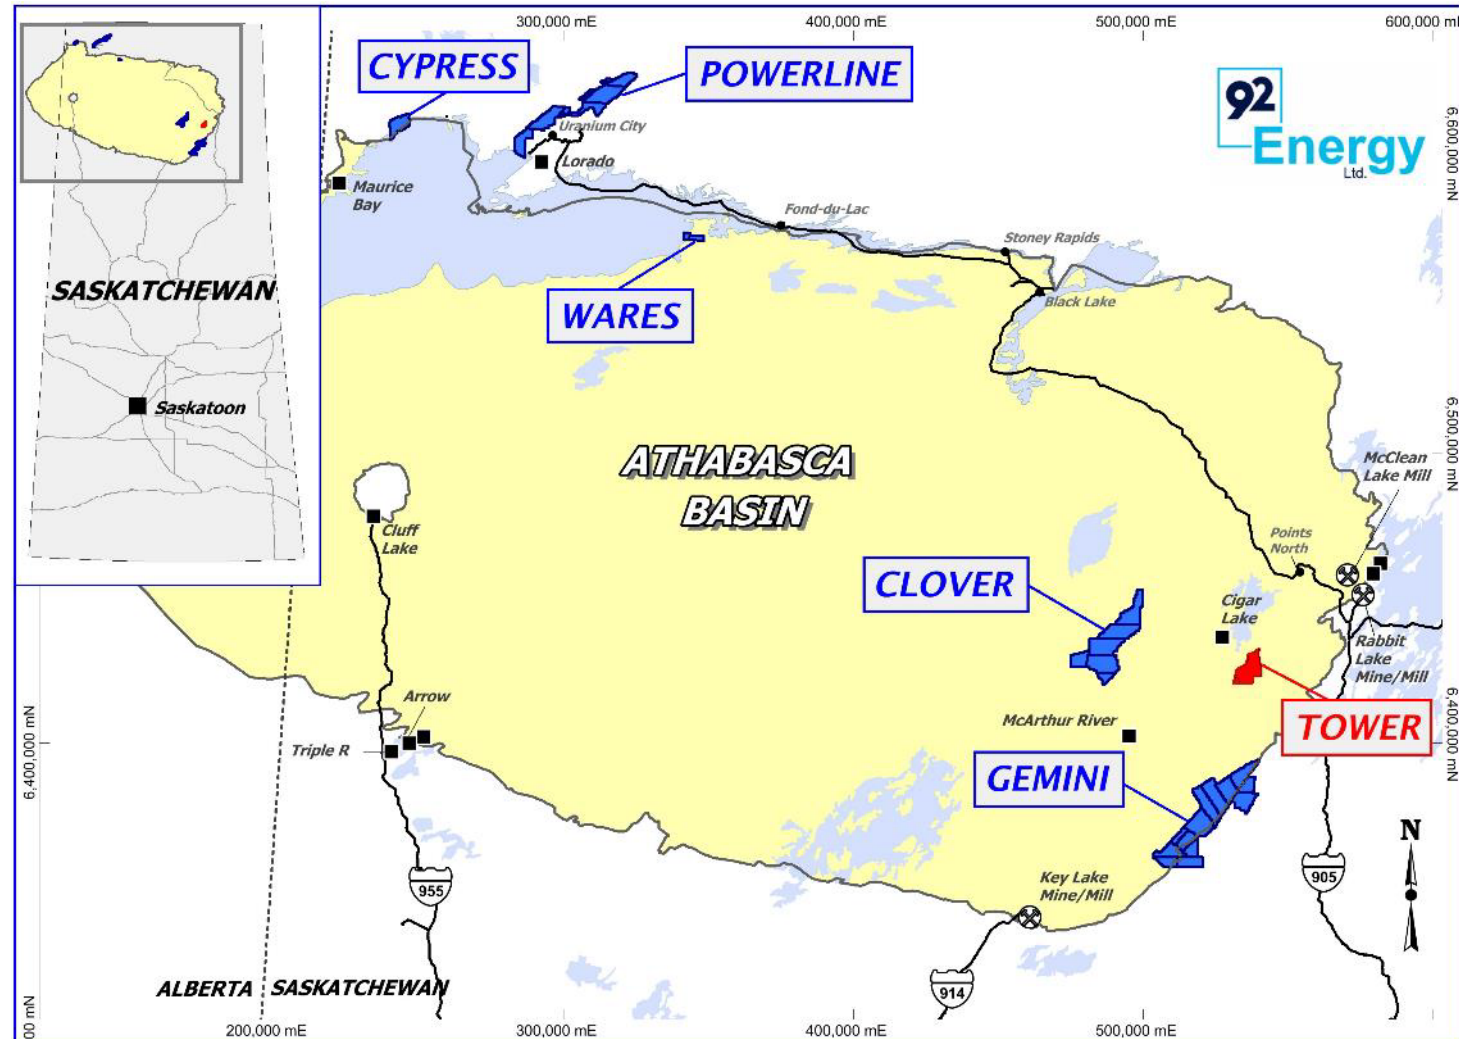

- Highlights from 2022 drill campaigns at the GMZ include:
  - GEM22-025: 40m @ 0.62%  $U_3O_8$  including 18.0m of 1.16%  $U_3O_8$
  - GEM22-027: 68.2m of total composite radioactivity including 34.4m @ 0.2%  $eU_3O_8$
  - GEM22-042: 25.4m @ 0.3%  $eU_3O_8$  including 3.6m @ 0.9%  $eU_3O_8$
- The GMZ has now been defined over a 200 by 220 meter area, between 60 to 200 meters vertically from surface and remains open in all directions

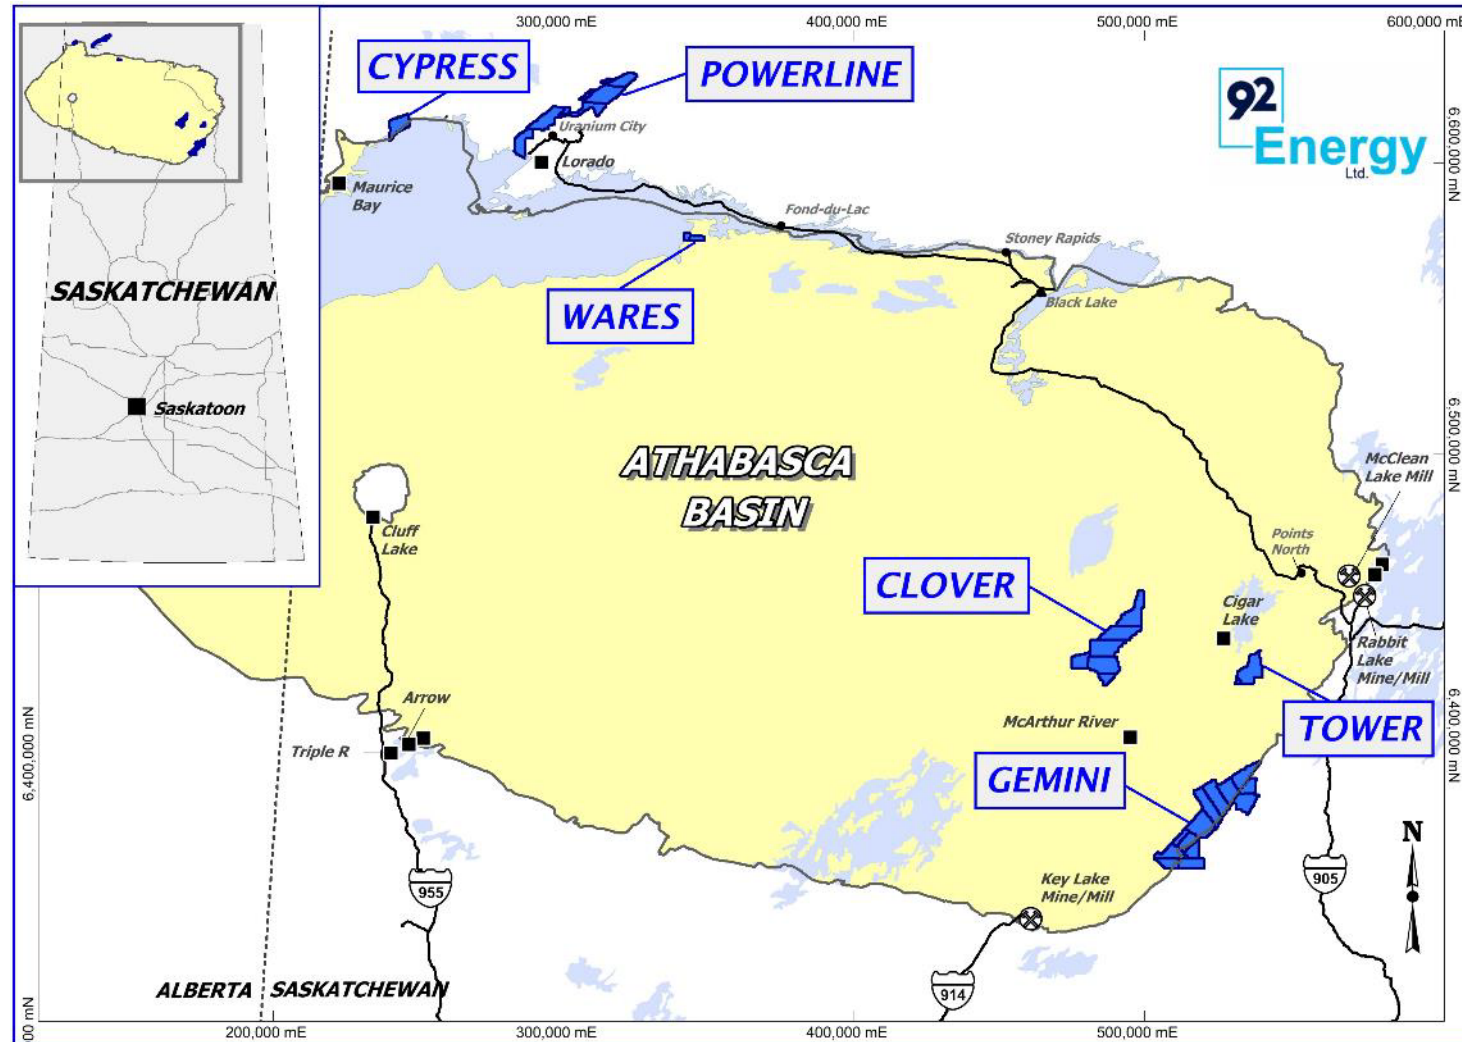

# Tower Project Drilling 2022

- Starting in September 2022, 92E undertook a maiden drill program at the Tower property
- Work was based out of Points North
- Positive initial drill results with anomalous radioactivity up to **960 cps**
- Significant faulting and hydrothermal alteration in drill core
- Results warrant follow up drilling and additional work programs

# Future 92 Work Programs

- **Gemini** – Ground and drone geophysical surveys underway, preparing for a winter 2023 drill program
- **Clover** – Planning underway for geophysical coverage in early 2023
- **Wares** – Planned ground geophysical program and drilling in 2023
- **Tower** – Planning underway for follow up drilling based on fall 2022 drill results
- **Powerline** – Planned airborne geophysical surveys, boots on the ground follow up

# 92 Energy Commitment to Northern Community Engagement

- People from northern communities (La Ronge and north) have made up on **average 20% of the total field staff** during drill programs at Gemini
- 92E intends to sustain at least 20% local employment for work programs, whenever possible
- Engagement with Hatchet Lake and English River First Nation currently ongoing

92E core splitter Don Mercredi (above) and Athabasca Catering chef Henry Bird (left) at the Gemini camp

# 92 Energy Commitment to the Environment

- 92 Energy is committed to **environmentally responsible exploration in Saskatchewan**
- Drill programs follow BMPs and utilize solid recovery units (SRU) to isolate radioactive materials and drill cuttings
- Undertaking work to record, clean and reclaim historical work sites left by previous operators on 92E ground

Above and left: Examples of reclaimed drill pads at the GMZ after clean up and first stage reclamation

# 92 Energy Saskatchewan Vendor Engagement

- 92E strives to engage Saskatchewan based vendors whenever possible
- Approximately **83% of the total expenditures** from 2021 and 2022 exploration programs have been in Saskatchewan based companies

La Ronge Petroleum

OPPORTUNITIES  
PROGRAM

# 92 Energy Training / Opportunities

- On the job training opportunities in the following fields exist with 92E:
  - ▶ Geological – drill core sampling, geotechnical logging, drill core logging, downhole surveying
  - ▶ Kitchen operations
  - ▶ Camp operations
  - ▶ Diamond drilling (with support from Bryson Drilling) - 5<sup>th</sup> man, drill helpers, pad builders
- 92 Energy is actively seeking interested personnel in all the above
- Needs identified by 92E:
  - ▶ Personnel transport (specifically to and from Wollaston or northern communities)
  - ▶ Winter road maintenance

Above and left: Work crews at the Gemini camp during 2022 drill programs
